SUMMARY

Backend Engineer with 2 years of experience building Python-based backend systems with Django, Django REST Framework, and Flask. Experienced in REST API design, PostgreSQL and MongoDB, asynchronous task processing with Celery and RabbitMQ, and containerized delivery with Docker on AWS.

EXPERIENCE

Broadstone Technologies

Lahore, Pakistan

Software Engineer

April 2026 – September 2026

- Built and maintained backend REST APIs in Flask, covering endpoint design, integration, and production support.
- Integrated automated security scanning into CI/CD pipelines, surfacing vulnerabilities and risk findings across application codebases before release.
- Produced AI bill of materials (AIBOM) inventories in the pipeline, giving visibility into AI and third-party dependency components across projects.
- Ran CI/CD delivery on AWS CodeCommit, CodePipeline, and GitHub Actions, automating build, test, and release stages.
- Provisioned and managed AWS infrastructure spanning EC2, S3, and IAM roles and policies under least-privilege access.
- Implemented OAuth 2.0 authentication and service-to-service authorization across AWS, Azure DevOps, Google Cloud, and GitHub integrations.

Programmers Force

Lahore, Pakistan

Backend Engineer

June 2024 – April 2026

- Designed and shipped RESTful APIs with Django REST Framework serving more than 100,000 daily requests in production.
- Introduced asynchronous task processing with Celery and RabbitMQ, moving scraping and report generation off the request path onto background workers.
- Tuned the data layer across PostgreSQL and MongoDB through schema design and query optimization to sustain heavy read and write throughput.
- Refactored core API logic and error handling, standardizing response formats and cutting production error rates.
- Containerized backend services with Docker and Docker Compose for reproducible environments from local to production.
- Built and maintained resilient web scraping pipelines using BeautifulSoup4 and Selenium.

TECHNICAL SKILLS

Languages	Python, SQL
Backend	Django, Django REST Framework, Flask, FastAPI, REST API design, OAuth 2.0, JWT, Swagger/OpenAPI
Databases	PostgreSQL, MongoDB, schema design, query optimization
Messaging/Async	Celery, RabbitMQ, background task processing
Security	Automated vulnerability scanning, risk analysis, software supply chain, AI bill of materials (AIBOM)
Cloud	AWS (EC2, S3, IAM), Azure DevOps, Google Cloud Secure Source Manager
CI/CD & DevOps	AWS CodeCommit, CodePipeline, GitHub Actions, Docker, Docker Compose
Tools	Git, Postman, Visual Studio Code

PROJECTS

JobHarvester

job-harvester-demo.vercel.app

- Built the Django REST API and PostgreSQL data model behind a job aggregation platform, exposing searchable, filterable listing endpoints.
- Engineered the scraping pipeline with BeautifulSoup4 and Selenium to ingest postings from Lahore-based technology companies, and deployed the service end to end.

Jobbr

Django REST Framework

- Developed a job board API with JWT authentication, role-based access control, and separate employer and job seeker workflows, including advanced filtering, resume uploads, and Swagger documentation.

EDUCATION

Lahore Garrison University

Lahore, Pakistan

Bachelor of Software Engineering

2020 – 2024

LEADERSHIP AND ACTIVITIES

- **Campus Director**, AI Community of Pakistan (AICP) — Led campus AI awareness initiatives and organized technology events for students.
- **Participant**, Aspire Leaders Program (ALP) — Selected for a globally competitive leadership program focused on social impact.
